

Installing R, RStudio, and RTools on a Windows Computer

1. Install R

- a. The website for R is <https://www.r-project.org/>
- b. To download it, go to <https://cran.r-project.org/mirrors.html> and select a mirror. Here are the ones nearby:
 - i. Paris - <https://cran.irsn.fr/>
 - ii. Brussels - <https://ftp.belnet.be/mirror/CRAN/>
- c. You'll get to a page that looks like this:

- d. Click on the link for your operating system. For Windows, you'll see something that looks like this:
- e. Click install R for the first time. You'll see something like this:
- f. Click on Download R 4.1.2 for Windows
- g. Run the downloaded file (R-4.1.2-win.exe).

2. Install RStudio

[Not essential, many like working in RStudio, I prefer simply working directly in R.]

RStudio needs R to be installed separately.

- a. Go to <https://www.rstudio.com/>
- b. Click on Download Rstudio
- c. There will be several versions. You want RStudio Desktop – Open Source License. It should be the one all the way to the left. Click the “download” button.
- d. Select your platform (e.g. RStudio 1.1.423 - Windows Vista/7/8/10 for Windows). This will download the file to your computer.
- e. Run it. (Click next; install; finish)

3. Install Rtools

- a. Go to <http://cran.r-project.org/bin/windows/Rtools/>

- b. download the most recent version (probably rtools40-x86_64.exe) and follow further instructions

4. *Install an appropriate editor*

Not necessary if you use RStudio (has a good built-in editor)

Not essential for working directly in R.

- a. *On Linux/Unix: Vim or EMACS with ESS*
- b. On Windows: Notepad++ with NppToR

<https://notepad-plus-plus.org/>

<https://sourceforge.net/projects/npptor/>

(Nice introduction to NppToR in a ppt presentation of the developer, Andrew Redd: [link](#))
